

# Introduction to Managing Risk in Horticulture

– learn how to proactively identify and control risks

*This Grow Home Safe workshop gives frontline managers and owners the tools to identify and control risks that may harm their workers.*

Through Grow Home Safe’s research we have found that workers are being harmed and these numbers continue to trend upwards.

In response to this trend, Health + Safety specialists at +IMPAC have developed this tailored horticultural training session to aid in the reduction of harm within the sector. Training will assist growers to meet their legal duties under the Health and Safety at Work Act 2015, meet G.A.P requirements, and provide useful tools and knowledge that can be utilised to create safe systems of work for their teams.

In our highly interactive *Introduction to Managing Risk Workshop*, participants will gain an understanding of the risk assessment process and practice and apply these concepts to horticultural situations.

## Workshop outcomes for participants:

- ✔ Understand the legal requirements for risk assessment
- ✔ Define the key terms including hazard, harm, risk (including critical risks) & risk controls
- ✔ Explain the steps within the risk assessment process
- ✔ Apply 3 specific tools to identify hazards
- ✔ Get help with meeting your G.A.P H + S requirements
- ✔ Understand what a safe system of work is, and its importance

## Introduction to Managing Risk in Horticulture Workshop

Duration: 4 hours

Ideal for: Frontline Managers and Owners
